# 2017 Tax Summary

The required minimum distribution (RMD) for any year is calculated as the December 31 value of the prior year (plus the actuarial present value of any additional benefit provided within the annuity contract) divided by the RMD factor from the appropriate table.<sup>2</sup>

## Uniform Lifetime Table<sup>3</sup>

#### For use by:

- Unmarried IRA owners
- Married IRA owners whose spouses are not more than 10 years younger
- Married IRA owners whose spouses are not the sole beneficiaries of their IRAs

(For married IRA owners whose spouses are more than 10 years younger, use Joint Life Table from Treas. Req. 1.401(a)(9) - 9, Q&A 3)

## Single Life Expectancy Table<sup>4</sup>

### **Spouse beneficiary**

IRA owner dies after Required Beginning Date (RBD): Beginning in the year following the year of the IRA owner's death, recalculate spouse beneficiary's single life expectancy each year while spouse beneficiary survives, using spouse beneficiary's age on birthday in that calendar year. If RMD would be less, spouse beneficiary can use IRA owner's term certain life expectancy. For that, use IRA owner's age attained on the birthday in the calendar year of IRA owner's death. Reduced by one for each passing year. (Note: Spouse beneficiary could instead roll over at IRA owner's death). Death before RBD: Same options as above, minus using IRA owner's term certain life expectancy, plus spouse beneficiary can delay until IRA owner would have turned age 70½, or spouse can defer all distributions as long as all funds are distributed in five years.

### **Nonspouse beneficiary**

Death after RBD: Beneficiary can use beneficiary's own term certain life expectancy. For that, use the beneficiary's age attained on the birthday in the calendar year after the calendar year of IRA owner's death. Reduce by one for each passing year. If RMD would be less, beneficiary can use IRA owner's term certain life expectancy. For that, use IRA owner's attained age in the calendar year of IRA owner's death. Reduce by one for each passing year.

Death before RBD: Same options as above, minus using IRA owner's term certain life expectancy, or beneficiary can defer all distributions as long as all funds are distributed in five years.

## No designated beneficiary

**Death after RBD:** Inheritor can use over IRA owner's term certain life expectancy. For that, use IRA owner's age attained on the birthday in the calendar year of owner's death. Reduce by one for each passing year. **Death before RBD:** Distribute all within five years.

This document is designed to provide general information on the subjects covered. It is not, however, intended to provide specific legal or tax advice and cannot be used to avoid tax penalties or to promote, market, or recommend any tax plan or arrangement. Please note that Allianz Life Insurance Company of North America and Allianz Life Insurance Company of New York, their affiliated companies, and their representatives and employees do not give legal or tax advice. You are encouraged to consult your tax advisor or attorney.

Purchasing an annuity within a retirement plan that provides tax deferral under sections of the Internal Revenue Code results in no additional tax benefit. An annuity should be used to fund a qualified plan based upon the annuity's features other than tax deferral. All annuity features, risks, limitations and costs should be considered prior to purchasing an annuity within a tax-qualified retirement plan.
